Perform the necessary auxiliary calculations on the attached blank papers. Write the result obtained by calculation in the right column nest to the task assignment. The result must be written clearly and unambiguously, otherwise it will not be accepted. For the correct answer you receive two points for each task. If the result has two parts, then one point can be obtained for each of them. After finishing the examination, submit the completed paper with the assignment and all papers with auxiliary calculations.

The time allotted for examination is 60 minutes. No aids are allowed other than the information printed on the examination paper (i.e. not a calculator or mathematical tables).
